

Gregory L Gray

PROGRAMMER AND WEB DEVELOPER

Tucson, AZ | 520.237.4637 | ggray@getnetez.com

Objective

To secure a challenging position with a reputable company where I can leverage my technical acumen and troubleshooting abilities to drive impactful solutions.

Experience

Spear Education LLC | Full Stack Developer IV, October 2013 - April 2024

1. Led a High-Performing Development Team:

- Orchestrated a team of 5 skilled developers in crafting cutting-edge JavaScript web applications using Vue.js.
- These applications not only outperformed our native mobile apps in customer engagement but also allowed faster iteration by avoiding the app stores.

2. Supported Legacy Systems:

- Provided maintenance and troubleshooting for tech debt in Zend Framework 1 including its integration with NetSuite through custom code in NetSuite created by 360 Cloud Solutions.
- The company is bound to NetSuite because of their accounting and CSM processes. I was able to maintain and improve that integration

3. Championed Brand Consistency:

- Pioneered the establishment of a comprehensive design system within Storybook.
- By ensuring consistent UI components and visual elements, we elevated brand identity and communication across all projects.

4. Revolutionized User Insights:

- Engineered a robust user event recording system, akin to Pendo, deployed on AWS EC2.
- This system captures over 10 events per second from client-side JavaScript triggers, providing invaluable data across a diverse range of metrics.

Injected Media LLC | Full Stack Developer, October 2013 – April 2024

1. Oversaw Ongoing Development of Engineering Design Day System:

- Stepped into a pivotal role, ensuring the continuous enhancement of the Engineering Design Day system at the University of Arizona.
- Collaborated closely with stakeholders to understand their evolving needs and translate them into actionable requirements.

2. Architected Robust Solutions:

- Conducted in-depth analysis of client requirements, meticulously modeling their needs.
- Authored comprehensive use cases, laying the groundwork for a seamless user experience.
- Developed both front-end and back-end components, seamlessly communicating via RESTful server endpoints.

3. Project Deployment and Success:

- Successfully deployed the system, enabling its effective use during the May 2013 Engineering Design Day event.
- Our solution empowered students, faculty, and industry partners, enhancing collaboration and showcasing innovative projects.

Project Advertising | Junior Full Stack Developer, May 2012 – November 2012

1. Built WordPress plugins, online chatbots, and web scrapers
